

## **FEEDING INSTRUCTIONS**

### *Precious Bichon Frise*

Your puppy is eating **Life's Abundance All Life Stage** dry dog food.

Feed  $\frac{2}{3}$  to 1  $\frac{1}{2}$  cups split into 3 feedings per day until pups are three months old. At four months old feed the same amount of food split into two feedings per day. After 6 months of age decrease food amount to  $\frac{1}{2}$  to 1 cup per day. Small breed puppies are considered adults around 6-7 months of age so their growing stage is almost complete.

This is by far one of the best dog foods available! I highly recommend this formula for your puppy his/her entire life for longevity.

It's not unusual for your puppy not to eat the first day or until the next day when they first go home. They will eat when they are hungry!
